

Plane problems in elementary geometry, or, Problems on the elementary conic sections with an introduction

Filesize: 2.33 MB

Reviews

A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.

(Mitchell Kuhn III)

PLANE PROBLEMS IN ELEMENTARY GEOMETRY, OR, PROBLEMS ON THE ELEMENTARY CONIC SECTIONS WITH AN INTRODUCTION

To save **Plane problems in elementary geometry, or, Problems on the elementary conic sections with an introduction** eBook, remember to refer to the web link below and save the file or gain access to additional information which are have conjunction with PLANE PROBLEMS IN ELEMENTARY GEOMETRY, OR, PROBLEMS ON THE ELEMENTARY CONIC SECTIONS WITH AN INTRODUCTION ebook.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 38 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1873 Excerpt: . . . to be tangent to another line at a given point, three determining points are virtually given by which to construct it. Or, if the radius is given, the outer extremities of any three positions of this radius will be three points, through which the circle can be drawn. 83. From these principles follow the tables below, which include the fundamental problems already given. The problems of a straight line through two explicit points, and of a circle through three such points, are omitted, as they are not problems of tangency. a. -- Tangent Straight Lines. Prob. 52. To draw a Tangent at a given point, on a circle whose centre is known. The solution here given is a useful application of Prob. 43. Thus (Fig. 21): 1st. Lay off the radius AC, each way from A, and on the circumference. 2d. Through C, and the points p and q thus found, draw indefinite lines, not shown. 3d. From p and q as centres, and radius, AC, of the given circle, draw arcs, and note their intersections with the lines just described. 4th. Join the points thus found, by a straight line, and it will be the required tangent at A. Principles. -- These will be perfectly obvious on making the construction. Prob. 53. To draw a Tangent at a given point, on a circle whose centre is not known. Let abc, Fig. 48, be the circle, and T the given point. Take any arc, Trt, on one side...
